2019 international practice exam mcq: *Cognitive Sciences and Education in Non-WEIRD Populations* Marcus Vinicius Alves, Roberta Ekuni, Maria Julia Hermida, Juan Valle-Lisboa, 2022-08-27 This book aims to present theoretical and practical innovations in the cognitive sciences and education fields focusing on studies and research conducted with non-WEIRD (i.e., western, educated, industrialized, rich and democratic) populations, especially from Latin America. Cognitive sciences and neuroscience have increased exponentially their knowledge in the last three decades, and today there is a corpus of knowledge about our central nervous system and its functioning that (adequately understood) has promising contributions for the educational field. Most of this knowledge, however, comes from central countries (North America, Europe) and is based on studies conducted on what has been called WEIRD populations. Much less is known about how the integration of cognitive sciences and neuroscience could impact education in non-WEIRD populations, which represent the great majority of the world's population and have quite diverse cultural and social characteristics. So, the main aim of this book is to present a non-WEIRD scientific

approach to problems in the cognitive sciences, neuroscience and education fields. Research presented in this contributed volume takes advantage of the diverse populations that characterize developing countries to explore how underrepresented populations learn, what works and what does not for cognitive science and education not only for the developing world, but also for understanding diversity in the whole world. Departing from this focus on diversity, chapters in this book present studies on theories, beliefs and misconceptions about the relationship between cognitive sciences and education; child and adolescent cognitive development; mathematics and language academic performance; and cognitive interventions to improve educational practice. *Cognitive Sciences and Education in Non-WEIRD Populations: A Latin American Perspective* will be a useful resource for both cognitive scientists and educational researchers interested in developing a more culturally sensitive approach to basic and applied research on cognitive sciences of education.

2019 international practice exam mcq: Technologies in Biomedical and Life Sciences Education Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content (including media as a learning supplement), in comparison to traditional face-to-face learning. Each chapter includes research on, and a broad-brush summary of, approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections, each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard, the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further, they address the ongoing discussion as to whether students need to be present for lectures, and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events, the authors also shed light on the impact that the COVID-19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently, the book offers life science educators valuable guidance on the technologies already available, and an outlook on what is yet to come.

2019 international practice exam mcq: Revolutionary Backlash Rosemarie Zagarri,

2011-06-03 The Seneca Falls Convention is typically seen as the beginning of the first women's rights movement in the United States. Revolutionary Backlash argues otherwise. According to Rosemarie Zagarri, the debate over women's rights began not in the decades prior to 1848 but during the American Revolution itself. Integrating the approaches of women's historians and political historians, this book explores changes in women's status that occurred from the time of the American Revolution until the election of Andrew Jackson. Although the period after the Revolution produced no collective movement for women's rights, women built on precedents established during the Revolution and gained an informal foothold in party politics and male electoral activities. Federalists and Jeffersonians vied for women's allegiance and sought their support in times of national crisis. Women, in turn, attended rallies, organized political activities, and voiced their opinions on the issues of the day. After the publication of Mary Wollstonecraft's A Vindication of the Rights of Woman, a widespread debate about the nature of women's rights ensued. The state of New Jersey attempted a bold experiment: for a brief time, women there voted on the same terms as men. Yet as Rosemarie Zagarri argues in Revolutionary Backlash, this opening for women soon closed. By 1828, women's politicization was seen more as a liability than as a strength, contributing to a divisive political climate that repeatedly brought the country to the brink of civil war. The increasing sophistication of party organizations and triumph of universal suffrage for white males marginalized those who could not vote, especially women. Yet all was not lost. Women had already begun to participate in charitable movements, benevolent societies, and social reform organizations. Through these organizations, women found another way to practice politics.
