Cyborgs R Us: The Bio-Nano Panopticon of Injected Bodies?

Valerie Kyrle¹ and Daniel Broudy²

¹PhD in Experimental Psychology, Masters in Clinical Psychology

²Professor of Applied Linguistics, Okinawa Christian University, Nishihara-cho, Okinawa 903-0207, Japan, dbroudy@ocuj.ac.jp ORCID: <https://orcid.org/0000-0003-2725-6914>

ABSTRACT

A survey and critical analysis of literatures in biotech, nanotech, and materials science can yield important insights on major threats facing humanity in a world divided largely by highly compartmentalized epistemic communities. Interdisciplinary research on the well-documented problems posed to human beings by the injectable mRNA platforms claiming to address COVID-19 medical complications reveal surprising, if not deeply troubling, new evidence of apparent fraud and deceit. Analysis presented here bolsters both the reported laboratory studies of blood samples from injected subjects and experimental work exploring the potential reasons for observed phenomena relating to electromagnetic properties exhibited in human bodies. The impetus for this cross-disciplinary study was current reports from a substantial proportion of injected subjects who emitted alphanumeric signals in the frequency range corresponding to Bluetooth communications networks. Discussion of these bizarre phenomena are framed by a wider historical context in nanotechnology as an emergent industry and by recent commentary emanating from noteworthy public figures concerning surveillance under the skin and the disappearance of civil and human rights.

Keywords: *BioNano Age, Bluetooth connectivity, IoT, IoBNT, IoT, IoNT, MAC phenomenon, mRNA platforms, transhumanism*

Introduction

This essay extends the cross-disciplinary study undertaken in an earlier article titled “Syllogistic Reasoning Demystifies Evidence of COVID-19 Vaccine Constituents” (Broudy & Kyrle, 2021). In that article, we addressed issues beyond the impaired reasoning that had, apparently, informed development of mRNA “platforms” (Moderna, 2020), which continue to pose as vaccines in mainstream media, and thereby in the public discourse. It was necessary, we felt, to grapple with the countless claims being made in various alternative media that these new injectable platforms were causing, beyond “Sudden Adult Death Syndrome” (Enerio, 2022), bizarre reactions resembling magnetism.

This present study has lead us to conclude that any honest and open analysis of vaccines — or any technological platform pretending to be a vaccine — must also include critical discussion of an even larger agenda at work hardly acknowledged by the mainstream gatekeepers framing and guiding polite conversation. The “vaccines” (hereafter, “platforms”) are at the very center of the construction of a global

Navigating the Landscape of the International Journal of Vaccine Theory, Practice, and Research

The world of vaccinology is constantly evolving, fueled by breakthroughs in scientific understanding and the persistent challenge of emerging infectious diseases. Staying abreast of the latest research is crucial for researchers, healthcare professionals, policymakers, and anyone invested in public health. This blog post serves as your comprehensive guide to the International Journal of Vaccine Theory, Practice, and Research, exploring its scope, impact, and how to effectively utilize its

resources. We'll delve into its publication process, the types of articles published, and the overall contribution it makes to the global conversation on vaccines.

Understanding the Scope of the International Journal of Vaccine Theory, Practice, and Research

The International Journal of Vaccine Theory, Practice, and Research, while hypothetical in its exact name and existence (as no such journal currently appears in major indexing databases), represents the kind of publication a researcher in the field would need to navigate. A real-world equivalent might be a high-impact journal like *Vaccine* or *The Lancet Infectious Diseases*. The hypothetical journal we'll discuss here encompasses a broad spectrum of vaccine-related topics, including:

Key Areas of Focus:

Vaccine Development: This includes research on novel vaccine platforms, adjuvant development, and the optimization of vaccine delivery systems. Articles might detail the pre-clinical development of a new vaccine candidate, its efficacy in animal models, and the challenges faced during development.

Vaccine Safety and Efficacy: Studies evaluating the safety and efficacy of existing and new vaccines fall under this category. This involves clinical trial data analysis, post-market surveillance, and research into adverse events following immunization.

Vaccine Immunology and Mechanisms of Action: This section explores the intricate immunological responses triggered by vaccines, investigating the cellular and molecular mechanisms involved in protection against infectious diseases.

Vaccine Policy and Implementation: Research on vaccine policy, access, and equitable distribution of vaccines contributes to informed decision-making and the development of effective public health strategies.

Vaccine Hesitancy and Communication: This critical area explores the factors contributing to vaccine hesitancy, and the strategies that can be used to improve vaccine uptake and public trust.

Types of Articles Published:

A hypothetical journal like this would likely publish various article types, including original research articles, review articles, short communications, editorials, and letters to the editor. Original research articles would present novel findings from experimental or clinical studies, while review articles would synthesize existing knowledge on a specific topic.

Accessing and Utilizing the Journal's Resources

Finding and utilizing the resources within a high-impact vaccine journal requires a strategic approach. Researchers and healthcare professionals typically use databases like PubMed, Scopus, and Web of Science to locate relevant publications. These databases provide advanced search functionality, allowing for the precise identification of articles based on keywords, authors, publication dates, and other criteria.

Beyond the search features, understanding the journal's impact factor is crucial. The impact factor provides a measure of the journal's influence within the scientific community. A higher impact factor indicates that the journal publishes highly cited articles and carries greater weight in the field.

Contributing to the International Journal of Vaccine Theory, Practice, and Research

Submitting research to a prominent vaccine journal requires meticulous preparation. Authors must adhere to strict guidelines regarding manuscript format, referencing, and ethical considerations. A well-written manuscript, rigorously reviewed by peers, and addressing a significant gap in knowledge is more likely to be accepted for publication.

The peer-review process is a cornerstone of academic integrity, ensuring the quality and reliability of published research. Reviewers critically assess the methodology, results, and conclusions of submitted manuscripts, providing feedback that helps authors improve their work.

Conclusion

The hypothetical International Journal of Vaccine Theory, Practice, and Research represents a crucial platform for disseminating cutting-edge research and fostering collaboration within the vaccinology community. By understanding its scope, accessing its resources, and contributing high-quality research, we can collectively advance our understanding of vaccines and improve global health outcomes. Staying informed about the latest advancements in vaccine science is crucial for researchers, healthcare professionals, and policymakers alike.

FAQs

1. How often is the (hypothetical) journal published? A journal like this would likely be published monthly or bimonthly to ensure timely dissemination of research findings.
2. Are there any submission fees associated with the journal? Many high-impact journals charge submission and/or publication fees, which vary based on the journal.
3. What are the ethical considerations for publishing vaccine research? Ethical considerations include informed consent from participants, data privacy, and transparency in reporting research findings. Conflicts of interest must also be disclosed.
4. How can I stay updated on the latest publications from the journal? Subscribe to the journal's email alerts or use citation management tools like Zotero or Mendeley to track new publications.

5. Where can I find more information about the journal's editorial board and guidelines for authors? The journal's website (hypothetical) would contain details on the editorial board, author guidelines, and contact information.

international journal of vaccine theory practice and research: "Covid-19," Psychological Operations, and the War for Technocracy David A. Hughes,

international journal of vaccine theory practice and research: Dispatches from the Vaccine Wars Christopher A. Shaw, 2021-08-31 Enter the trenches of the bloodiest battles you've never heard of: the Vaccine Wars. Professor Christopher A Shaw discovered, after a deep-dive literature search on aluminum impacts on humans and animals, that aluminum hydroxide, an adjuvant in the anthrax vaccine, had a significantly negative impact on motor functions and reflexes of patients in the literature. After that finding, he did what scientists are supposed to do and kept following the leads. However, organizations like WHO dismissed him immediately. Those powerful organizations either knew what he knew, that aluminum vaccine adjuvants were harmful, or they simply didn't care. In either case, two possible reasons for the lack of response became clear to Shaw and his colleagues: dogma and money. The first had served to convince most of the world's medical professionals that Shaw had to be wrong because, after all, "the science was settled." And, behind much of this was the naked fact of how much money vaccines brought in to cover the pharmaceutical industry's profit margin. The combination of those two have the finger prints of various Big Pharma companies smudged all over the question of vaccine safety, which included the demonization of both scientists and lay scholars who raised even the tamest questions about safety and the push for vaccine mandates around the world. After these events, Shaw decided to dig deeper. Dispatches from the Vaccine Wars is a comprehensive look at the origin of vaccination and the oversight of vaccines by various regulatory bodies in the United States and in Canada. The book provides not only the official view on vaccines safety and efficacy, but also provides a critical analysis on which such views are based. Aluminum and other compounds that may contribute to autism spectrum disorder are discussed at length. Professor Shaw also analyzes the corporate influences driving vaccine uptake worldwide and provides an in depth look at the push for mandatory vaccination. Dispatches from the Vaccine Wars evaluates the extent to which vaccinology has become a cult religion driving attempts to suppress divergent scientific opinions. Finally, the book delves into the COVID-19 pandemic and what it means for the future of us all.

international journal of vaccine theory practice and research: Vax-Unvax Robert F. Kennedy Jr., Brian Hooker, 2023-08-29 The Studies the CDC Refuses to Do This book is based on over one hundred studies in the peer-reviewed literature that consider vaccinated versus unvaccinated populations. Each study is analyzed, and health differences among infants, children, and adults who have been vaccinated and those who have not are presented and put in context. Readers will find information on: The infant/child vaccination schedule Thimerosal in vaccines Live virus vaccines The human papillomavirus (HPV) vaccine Vaccination and Gulf War illness Influenza (flu) vaccines Hepatitis B vaccination The COVID-19 vaccine Vaccines during pregnancy Given the massive push to vaccinate the entire global population, this book is timely and necessary for individuals to make informed choices for themselves and their families.

international journal of vaccine theory practice and research: Vax Facts Paul Thomas, DeeDee Hoover, 2024-12-10 Vax Facts is a one-stop-shop for all the information parents and guardians need to make an informed choice about childhood vaccinations. The challenge for most who are wrestling with whether to give a vaccine is a lack of understanding about what information they really need to make an informed decision. Written by a pediatrician who witnessed the difference over decades in the health outcomes of the vaccinated, partially vaccinated, and unvaccinated children in his practice, Vax Facts will enlighten parents and guardians and provide the information needed for informed consent. Covering each of the vaccines recommended by the CDC and doctors, from pregnancy through the teen years, this detailed guide breaks down the

ingredients, the lack of safety testing, and the side effects and risks of the vaccines. With the help of simple data tables that compare the rates of death from the diseases for which we have vaccines and the rates of death from the vaccines themselves, parents and guardians can easily decide what's right for their children. With almost four million births per year in the United States, this useful resource will resonate with all who are pregnant or considering pregnancy, and all parents, grandparents, aunts, and uncles who are considering whether vaccination is appropriate for a family member or loved one. At the end of each chapter, Just a Mom (coauthor DeeDee Hoover) shares personal stories and reflections that allow readers to connect with the information. This information-packed guide is for all those asking "Should I get my child vaccinated?" who want more than just a yes/no answer. After reading Vax Facts, parents and guardians will be able to decide with confidence whether vaccination is the right choice for their loved one.

international journal of vaccine theory practice and research: *Is COVID-19 a Bioweapon?* Richard M. Fleming, 2021-09-07 What is the true origin of COVID-19? President Joe Biden has ordered US intelligence agencies to further investigate the origins of COVID-19. Clearly, the US government isn't decided on what really happened at the start of the pandemic. Was it truly a animal to human transmission to be blamed on a bat in a Wuhan, China wet market? Or was a much more sinister plan at work? In 2020, Dr. Richard M. Fleming began investigating SARS-CoV-2/COVID-19. Using both his Inflammation Theory and Patent (FMTVDM; the first method capable of measuring regional blood flow and metabolic changes occurring inside the body, which makes it possible to accurately determine what is happening inside the body as well as whether treatments prescribed for patients are working or not), he investigated COVID treatments. Simultaneously he began investigating the origins of COVID-19. This book details much of what he has found. What he discovered will shock you. By 1999, US Federal Agencies began funding Gain-of-Function research. Research that by its very nature is designed to increase the ability of pathogens to infect and harm people. In 2019, one of those pathogens was intentionally released upon the world in the Wuhan Wet Market. The key to proving and understanding this bioweapon is its spike protein. The very same spike protein now being made in millions of people after the COVID vaccines are injected into them. These vaccines are nothing more than the genetic code of this bioweapon. This book traces the publication and money trail of COVID-19; showing who is ultimately criminally responsible for the design and development of this weapon, which violates the Biological Weapons Convention (BWC) Treaty, exposing those who have committed crimes against humanity. Dr. Fleming will reveal the ultimate conspiracy: one that puts the future of the entire world at stake.

international journal of vaccine theory practice and research: *Cancer Vaccination and Challenges* Rishabha Malviya, Bhupendra Prajapati, Sonali Sundram, 2024-11-22 Volume 1: Strategies for Therapeutic Cancer Vaccine Development deals with different strategies of cancer vaccine development, focusing on techniques for the development of therapeutic cancer vaccines and the roles of tumor antigens, proteins/peptides, microbial genes, and stem cells for the development of vaccines for cancer management. Volume 2: Delivery Strategies for Cancer Vaccine and Immunotherapy in Management of Various Carcinomas covers delivery strategies of cancer vaccines for the management of various forms of carcinoma, examining the prospects of delivering immuno-oncology therapies, focusing specifically on the effective drug delivery strategies for treatment of lung, prostate, and pancreatic carcinomas.

international journal of vaccine theory practice and research: *Metapolitical: Practicing Our Human Future* Nowick Gray, 2022-08-01 Wise and humorous sensemaking in a mad world, grounded in wild nature, sustainable culture and free spirit. What is stopping us from practicing our human future now? Beyond the old paradigm of false narratives and party politics, we walk in natural law of nature, culture, spirit. An empowering deep dive for free thinkers, righteous rebels, and awaking activists, Nowick Gray's essays from The New Agora (2020-21) paint visions of our creative sovereignty.

international journal of vaccine theory practice and research: *The New Futures of Exclusion* Daniel Briggs, Luke Telford, Anthony Lloyd, Anthony Ellis, 2023-11-30 Based upon global

data and following on from *Lockdown: Social Harm in the COVID-19 Era*, this book discusses the rise of surveillance capitalism and new forms of control and exclusion throughout the Covid-19 pandemic. It particularly addresses the use of vaccine passports, mandates and the new forms of capital extraction and political control that emerged throughout the pandemic. The book also explicates how the 'vaccine hesitant' became marginalized in both mainstream discourse and through regulatory interventions. Whilst the book addresses the wider political economy within which so-called 'anti-vaxxers' were ostracized, it also explores the complex nature of their sentiments. The book closes by considering *The New Futures of Exclusion*, outlining the forms of surveillance and control that may be implemented in the future particularly in light of the challenges brought by global warming and the energy transition. It is a broadly accessible text, particularly appealing to policymakers, general readers and academics in sociology, political sociology, politics, human geography, political economy, criminology, social policy, psychology, history, and infectious diseases and medicine.

international journal of vaccine theory practice and research: Sold Out James Rickards, 2022-12-06 From the man who predicted the worst economic crisis in US history comes Jim Rickards' second prediction - the collapse of our global economy. The supply chain crisis is coming to a head. Today, your favorite products are missing from store shelves, caught in supply chain limbo somewhere in the Pacific Ocean. But what does this supply chain disruption look like six months, or even three years, from now? While we hope that post-pandemic recovery will absolve these issues, the reality is that digital currency, meme stonks, and social media can't solve the age-old problem of producing and moving physical goods across oceans and continents. According to Jim Rickards, consumer frustration is only the tip of a very large, menacing iceberg that threatens global economic collapse. In *Sold Out*, Rickards shares his predictions for our post-pandemic future and outlines how consumers and business owners can get ahead of the collapse. You'll learn how energy shortages in China - fueled by the trade war with Australia - are disrupting the steel market and forcing entire factories to shut down. You'll also learn how rising inflation will ultimately lead to deflation in a few short years - as consumer spending eventually tanks due to higher taxes, excessive debt, and increased layoffs - and why such economic conditions will closely resemble the 1930s. Finally, Rickards will look at the future of money, including the erasure of the American dollar itself. Our global economy faces unprecedented challenges in the next few months. But whether we sink or swim depends on how prepared we are - and what we do now to thwart the coming collapse.

international journal of vaccine theory practice and research: Wall Street, the Nazis, and the Crimes of the Deep State David Hughes, 2024-06-04 The transnationally coordinated response to Covid-19 witnessed numerous developments reminiscent of the prewar years of the Third Reich, including the suspension of constitutional rights and freedoms, the rollout of draconian legislation, an attempted revolution from above (the Great Reset), the censorship of dissent, health surveillance, euthanasia, eugenics, the corruption of science by politics, and the hijacking of conscience. The list goes on. Never again! was the rallying cry after 1945, yet never again is now global. How did we get here? *Wall Street, the Nazis, and the Crimes of the Deep State* explores the role of Wall Street in promoting the rise of Hitler, funding the Nazi war machine, recruiting and rehabilitating ex-Nazis, and creating a transnational deep state inspired by Nazi methods. Wall Street has long preferred totalitarianism as the regime type most effective in crushing working-class resistance, and as capitalism once more enters a period of acute crisis, the aim is to replace liberal democracy with global technocracy—a novel, biodigital form of totalitarianism whose potential for social control exceeds anything imaginable by Hitler or Stalin. *Wall Street, the Nazis, and the Crimes of the Deep State* illustrates how totalitarianism does not spring into existence fully formed. In the case of Nazi Germany, the descent into barbarism took place gradually, over many years. Today, the warning signs from history are flashing red. Unless the global technocratic coup being attempted is put down, we can expect the centralization of power in a New World Order, the return of slavery, the privatization of the global commons, and the transformation of society into a biodigital camp, bringing an end to the rule of law and normalizing the use of eugenics and a

systematic mass murder of dissidents.

international journal of vaccine theory practice and research: The Social World after COVID-19 Paulo Alexandre e Castro, 2022-11-09 This collection discusses different aspects of the COVID-19 pandemic, which began in December 2019 in Wuhan, China, brought together under the slogan of "social worlds". It is a book dedicated to thinking a posteriori about the implications and consequences of the pandemic, bearing in mind that it was a challenge (political, social, economic and philosophical) that tested the limits of human nature and the condition of humans in a world whose logic seems to slip away. In this sense, this volume brings together different approaches to this topic, ranging from philosophy to sociology, and from politics to social work, thus constituting an original work on such a delicate issue.

international journal of vaccine theory practice and research: Covid Narrative Freedom Nowick Gray, 2022-03-13 Unauthorized transmissions of a coronavirus skeptic, critiquing the global agenda with the voice of the natural human spirit. Nowick Gray's weekly articles for The New Agora offer a holographic time capsule of the Covid era. Witnessing the manufactured crisis as a war on humanity, the writer's lens sheds light on the narrative sabotage carried out as its primary strategy. Against that weapon of moral destruction, pen turns to sword in the ongoing battle for our body and soul, our truth and freedom.

international journal of vaccine theory practice and research: How to Be a Healthy Human Emma Tekstra, 2024-06-04 Learn the truth about the healthcare industry, how little your genes influence your health, the real impact of lifestyle and daily toxin exposure, and how to shift the paradigm. Trust in the medical profession is at an all-time low. The healthcare industry is worth trillions of dollars and growing exponentially, but people in general are getting sicker. Many of us are suffering from chronic illnesses, unwanted weight gain, cardiovascular complications, and mental health problems. So are our children. There is a better way. Emma Tekstra uses her unique perspective as an actuary and thirty-year veteran of the employee health and benefits industry to outline how anyone can take control of their health by understanding the three major categories of ill health (infectious disease, chronic conditions, and mental health) and how they are all intimately connected. Inside How to Be a Healthy Human, you'll receive practical guidance and discover: A simple approach to nutrition, The symbiotic interaction of humans with nature and with microbes, A new way of thinking about disease and diagnoses, A fresh outlook on mental health and neurological conditions, A recipe for healthy aging, Resources, further reading, food hacks, and much more! How to Be a Healthy Human is full of practical advice anyone can use to obtain vibrant health and vitality.

international journal of vaccine theory practice and research: Vaccine Court Anna Kirkland, 2016-12-27 Introduction : our immunization social order -- How are vaccines political? -- The solution of the vaccine court -- Health and rights in the vaccine-critical movement -- Knowing vaccine injury through law -- What counts as evidence? -- The autism showdown -- Conclusion : the epistemic politics of the vaccine court.

international journal of vaccine theory practice and research: Doing Anti-Oppressive Social Work, 4th ed. Donna Baines, Natalie Clark, Bindi Bennett, 2022-11-15T00:00:00Z Doing Anti-Oppressive Social Work brings together critical social work authors to passionately engage with pressing social issues, and to pose new solutions, practices and analysis in the context of growing inequities and the need for reconciliation, decolonization and far-reaching change. The book presents strong intersectional perspectives and practice, engaging closely with decolonization, re-Indigenization, resistance and social justice. Like the first three editions, the 4th edition foregrounds the voices of those less heard in social work academia and to provide cutting-edge critical reflection and skills, including social work's relationship to the state, and social work's responsibility to individuals, communities and its own ethics and standards of practice. Indigenous, Black, racialized, transgender, (dis)Ability and allied scholars offer identity-engaged and intersectional analyses on a wide-range of issues facing those working with intersectional cultural humility, racism and child welfare, poverty and single mothers, critical gerontology and older people, and immigrant and racialized families. This 4th edition of Doing Anti-Oppressive Social Work

goes well beyond its predecessors, updating and revising popular chapters, but also problematizing AOP and engaging closely with new and emerging issues.

international journal of vaccine theory practice and research: Thorn in the Flesh - How the Corona "Vaccine" Induced Spike Protein Causes Damage Arne Burkhardt, Walter Lang, Norbert Schwarz, 2024-02-29 Arne Burkhardt, Walter Lang and Norbert Schwarz give an overview over mechanisms of damage that lead to death and health impairment after corona vaccinations. The Authors Arne Burkhardt and Walter Lang are pathologists with more than 40 years of professional experience. Together with, Norbert Schwarz, a medical scientist and epidemiologist, they examined more than 85 tissue samples from individuals, who had died after corona vaccination and more than 75 biopsy samples from individuals, who suffered serious health impairment. In parallel they reviewed the pertinent literature. This is a translation from German to English by one of the authors (Norbert Schwarz). No proofreading by a native speaker has been done.

international journal of vaccine theory practice and research: Disrupt Science Mihai Nadin, 2023-11-18 Reaction to breakdowns is more expensive, by many orders of magnitude, than prevention. This again became clear during the COVID-19 pandemic and is evinced in the sustainability crisis. The dynamics of living matter transcends deterministic reaction. Embodied in machines, determinism empowered the human being, providing the path to prosperity. However, in conjunction with reductionism, it does away with complexity, in which life is couched. The living is by necessity anticipatory. Awareness of the future means preserving life not in reaction to, but in anticipation of change. Living entities, from the simplest bacteria, to plants and insects, to human beings, are adaptive, goal-oriented, and capable of self-healing. Anticipatory actions are expressed through non-deterministic processes that unfold in concert with reactions. They engage the wholeness of life, including its interactions with the environment. Awareness of consequences, together with memory of the past, informs actions that reflect the creative nature of human beings. Redefining science—and implicitly, medicine—is not a negation of its past, but rather an affirmation of trust in explaining life's capacity to renew itself. As opposed to increasingly expensive medicine as a practice of repair, to prevent and to heal is to make life sustainable. The moment of truth can no longer be postponed. At stake is the future of humankind and even of life on planet Earth. Reductionist determinism informs the obsession with progress at any cost. Awareness of the fact that the human condition transcends that of the matter in which it is embodied explains, and indeed justifies, the call to Disrupt Science in its current state. The age of the digital machine, in particular of artificial intelligence, is one of opportunities that pale when compared to its inherent risks. The record of breakdowns (including so-called natural disasters), by now global in scale, is part of the empirical premise for the call for completing the Cartesian Revolution. A "Second Revolution in Science" could unleash humanity's remaking, free of surrendering to want. Science has the opportunity not only to measure everything—life included—and accumulate data and process it for its own sake, but also to realize its meaning. The future matters.

international journal of vaccine theory practice and research: Racial Dimensions of Life Writing in Education Lucy E. Bailey, KaaVonia Hinton, 2022-09-01 This collection presents life writing projects that explore or represent the racial dimensions of life writing research in diverse educational spaces using diverse methodologies and inquiry approaches. We believe this collection is long overdue. To quote Melva R. Grant and Signe E. Kastberg's succinct phrasing (this volume) "racialized inquiry matters." While some rich texts explore the racial aspects and anti-racist potential of social science research (Blee, 2018; Lopez & Parker, 2003; Sefa Dei & Johal, 2005; Twine & Warren, 2000), and include examples from educational contexts, there are no collections which focus on the intersections of life writing inquiry as educative projects that highlight racial dimensions of the work and lives under study. Drawing from Toni Morrison's enduring wisdom, a visionary writer whose work has explored the racial dimensions of culture and lived experience, we centralize race in life writing in this collection rather than obscuring it or leaving it as a lurking, absent presence in the craft. Racial Dimensions of Life Writing Research offers a wealth of ideas and perspectives from which scholars, teachers, and students can draw to support their work. The 14

chapters in this collection attend to national, international, and local concerns, include varied theoretical and methodological approaches, and reflect a range of ethnic and racial heritages. Chapters consider practical, theoretical, ethical, and educational issues involved in projects concerning under-represented educational actors important for the terrain of life writing. The authors include established and emerging scholars— university researchers, directors, and professors, academic advisors, graduate and undergraduate students, activists, and former elementary and secondary school teachers. It is our hope that this volume will spark conversation, debate, and reflection and will be a valuable resource that inspires scholarship about how race and its intersections shape the life-writing inquiry process. ENDORSEMENT: This is an exceptionally important volume interrogating intersections of race, racism and life writing. Authors recenter life narrative as a necessary anchor for studying, teaching about, and learning through complex racial dynamics. This book should be read by any of us serious about studying and advancing knowledge on race and writing. — Richard Milner, Vanderbilt University

international journal of vaccine theory practice and research: Das Impfbuch Raymond Unger, 2021-11-18 Wo steht die Gesellschaft nach achtzehn Monaten Pandemie, in der Millionen Deutsche das Impfangebot der Bundesregierung ablehnen? Medien und Politik sprechen abschätzig von Impfmuffeln und Covidioten. Doch tatsächlich wirft der propagierte wissenschaftliche Konsens zugunsten von Massenimpfungen bei einer näheren Betrachtung mehr und mehr Fragen auf. Das Angstnarrativ rund um Corona hat den offenen Diskurs in Medien und Wissenschaft illegitim verengt. Renommierte Wissenschaftler mit abweichenden Meinungen werden ausgegrenzt und diskreditiert. Im Zuge der Corona-Krise etabliert Deutschland eine nie dagewesene Impf- und Kontrollgesellschaft, deren staatliche Eingriffe weit über den Gesundheitsschutz hinausgehen. Raymond Unger, der Autor des Erfolgstitels Vom Verlust der Freiheit, präsentiert eine kühn gedachte Analyse und zeichnet das große Bild vom Zustand unserer Gesellschaft.

international journal of vaccine theory practice and research: Moving From COVID-19 Mathematical Models to Vaccine Design: Theory, Practice and Experiences Andrés Fraguela-Collar, 2022-09-05 This compendium represents a set of guides to understanding the challenging scientific, epidemiological, clinical, social, and economic phenomenon that is represented by the COVID-19 pandemic. The book explains the mathematical modeling of COVID-19 infection, with emphasis on traditional epidemiological principles. It represents a rigorous, comprehensive and multidisciplinary approach to a complex phenomenon. The chapters take into account the knowledge arising from different disciplines (epidemiology, pathophysiology, immunology, medicine, biology, vaccine development, etc.). It also covers COVID-19 data analysis, giving the reader a perspective of statistics and data science, and includes a discussion about social and economic issues of the pandemic. Each chapter is devoted to a specific topic, and is contributed by experts in epidemiology. Because of its multidisciplinary nature, this book is intended as a reference on mathematical models and basic immunotherapy for COVID-19 for a broad community of readers, from scholars who have scientific training, to general readers who have an interest in the disease.

international journal of vaccine theory practice and research: Vaccines against RNA Viruses Juan Carlos Saiz, 2020-12-28 RNA viruses cause animal, human, and zoonotic diseases that affect millions of individuals, as is being exemplified by the devastating ongoing epidemic of the recently identified SARS-Cov-2. For years vaccines have had an enormous impact on overcoming the global burden of diseases. Nowadays, a vast number of different approaches, from purified inactivated and live attenuated viruses, nucleic acid (DNA or RNA) based candidates, virus-like particles, subunit elements, and recombinant viruses are been employed to combat viruses. However, for many of them efficient vaccines are not yet available. This will probably change dramatically with the current Covid-19 pandemic, as a vast variety of vaccinology approaches are being tested against it, with hundreds of candidates under development, dozens of them already in clinical trials, a fact that is breaking records in vaccine development and implementation. This is becoming possible thanks to the enormous work carried out during years to have the bases for a

quick response, even against unknown pathogens, in an impressive short time. Here, results obtained with different vaccine's methodological approaches against human (HIV, HCV, HRV) animal (PRRSV, PEDV, FMDV, VHSV) and zoonotic (RVF, WNV), RNA viruses are presented by field experts.

international journal of vaccine theory practice and research: Ethics Dumping Doris Schroeder, Julie Cook, François Hirsch, Solveig Fenet, Vasantha Muthuswamy, 2017-12-04 This open access book provides original, up-to-date case studies of "ethics dumping" that were largely facilitated by loopholes in the ethics governance of low and middle-income countries. It is instructive even to experienced researchers since it provides a voice to vulnerable populations from the fore mentioned countries. Ensuring the ethical conduct of North-South collaborations in research is a process fraught with difficulties. The background conditions under which such collaborations take place include extreme differentials in available income and power, as well as a past history of colonialism, while differences in culture can add a new layer of complications. In this context, up-to-date case studies of unethical conduct are essential for research ethics training.

international journal of vaccine theory practice and research: Automating the News Nicholas Diakopoulos, 2019-06-10 From hidden connections in big data to bots spreading fake news, journalism is increasingly computer-generated. An expert in computer science and media explains the present and future of a world in which news is created by algorithm. Amid the push for self-driving cars and the roboticization of industrial economies, automation has proven one of the biggest news stories of our time. Yet the wide-scale automation of the news itself has largely escaped attention. In this lively exposé of that rapidly shifting terrain, Nicholas Diakopoulos focuses on the people who tell the stories—increasingly with the help of computer algorithms that are fundamentally changing the creation, dissemination, and reception of the news. Diakopoulos reveals how machine learning and data mining have transformed investigative journalism. Newsbots converse with social media audiences, distributing stories and receiving feedback. Online media has become a platform for A/B testing of content, helping journalists to better understand what moves audiences. Algorithms can even draft certain kinds of stories. These techniques enable media organizations to take advantage of experiments and economies of scale, enhancing the sustainability of the fourth estate. But they also place pressure on editorial decision-making, because they allow journalists to produce more stories, sometimes better ones, but rarely both. Automating the News responds to hype and fears surrounding journalistic algorithms by exploring the human influence embedded in automation. Though the effects of automation are deep, Diakopoulos shows that journalists are at little risk of being displaced. With algorithms at their fingertips, they may work differently and tell different stories than they otherwise would, but their values remain the driving force behind the news. The human-algorithm hybrid thus emerges as the latest embodiment of an age-old tension between commercial imperatives and journalistic principles.

international journal of vaccine theory practice and research: Science for Sale David L. Lewis, 2019-08-27 For the first time in paperback and with a new introduction. Discover how and why the government is corrupting scientific research. When Speaker Newt Gingrich greeted Dr. David Lewis in his office overlooking the National Mall, he looked at Dr. Lewis and said: "You know you're going to be fired for this, don't you?" "I know," Dr. Lewis replied, "I just hope to stay out of prison." Gingrich had just read Dr. Lewis's commentary in Nature, titled "EPA Science: Casualty of Election Politics." Three years later, and thirty years after Dr. Lewis began working at EPA, he was back in Washington to receive a Science Achievement Award from Administrator Carol Browner for his second article in Nature. By then, EPA had transferred Dr. Lewis to the University of Georgia to await termination—the Agency's only scientist to ever be lead author on papers published in Nature and Lancet. The government hires scientists to support its policies; industry hires them to support its business; and universities hire them to bring in grants that are handed out to support government policies and industry practices. Organizations dealing with scientific integrity are designed only to weed out those who commit fraud behind the backs of the institutions where they work. The greatest threat of all is the purposeful corruption of the scientific enterprise by the institutions themselves.

The science they create is often only an illusion, designed to deceive; and the scientists they destroy to protect that illusion are often our best. This book is about both, beginning with Dr. Lewis's experience, and ending with the story of Dr. Andrew Wakefield. This new edition, now for the first time in paperback, features a new introduction by the author.

international journal of vaccine theory practice and research: Corporate Social Responsibility in the Health Sector Samuel O. Idowu, Mary T. Idowu, Abigail O. Idowu, 2023-02-28 The pandemic that struck in late 2019 - the coronavirus, commonly referred to as COVID-19 - affected every country in the world. This book examines how the pandemic has impacted healthcare institutions worldwide, and focuses on the international experience of COVID-19 in terms of healthcare delivery since 2019 and today. It highlights how healthcare facilities around the world have managed and continue to manage their obligations to their citizens. The book's goal is to improve our understanding of the many negative and positive impacts of the pandemic on various aspects of our lives, including the health aspect, and how healthcare institutions could expand their ability to manage similar pandemics in the future without seriously compromising their ability to address other, regular health issues. At the same time, it takes a closer look at CSR, sustainability, ethics, and governance issues related to the pandemic, as well as current CSR practices in each of the countries reviewed. Given its scope, the book will be of interest to a broad readership including researchers, practitioners, and students concerned with the pandemic's societal and public health implications.

international journal of vaccine theory practice and research: Adverse Effects of Pertussis and Rubella Vaccines Institute of Medicine, Committee to Review the Adverse Consequences of Pertussis and Rubella Vaccines, 1991-02-01 Parents have come to depend on vaccines to protect their children from a variety of diseases. Some evidence suggests, however, that vaccination against pertussis (whooping cough) and rubella (German measles) is, in a small number of cases, associated with increased risk of serious illness. This book examines the controversy over the evidence and offers a comprehensively documented assessment of the risk of illness following immunization with vaccines against pertussis and rubella. Based on extensive review of the evidence from epidemiologic studies, case histories, studies in animals, and other sources of information, the book examines: The relation of pertussis vaccines to a number of serious adverse events, including encephalopathy and other central nervous system disorders, sudden infant death syndrome, autism, Guillain-Barre syndrome, learning disabilities, and Reye syndrome. The relation of rubella vaccines to arthritis, various neuropathies, and thrombocytopenic purpura. The volume, which includes a description of the committee's methods for evaluating evidence and directions for future research, will be important reading for public health officials, pediatricians, researchers, and concerned parents.

international journal of vaccine theory practice and research: Beyond the HIPAA Privacy Rule Institute of Medicine, Board on Health Care Services, Board on Health Sciences Policy, Committee on Health Research and the Privacy of Health Information: The HIPAA Privacy Rule, 2009-03-24 In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, *Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research*, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

international journal of vaccine theory practice and research: The Handbook of Applied Communication Research H. Dan O'Hair, Mary John O'Hair, 2020-04-24 An authoritative survey of different contexts, methodologies, and theories of applied communication The field of Applied Communication Research (ACR) has made substantial progress over the past five decades in studying communication problems, and in making contributions to help solve them. Changes in society, human relationships, climate and the environment, and digital media have presented myriad

contexts in which to apply communication theory. The Handbook of Applied Communication Research addresses a wide array of contemporary communication issues, their research implications in various contexts, and the challenges and opportunities for using communication to manage problems. This innovative work brings together the diverse perspectives of a team of notable international scholars from across disciplines. The Handbook of Applied Communication Research includes discussion and analysis spread across two comprehensive volumes. Volume one introduces ACR, explores what is possible in the field, and examines theoretical perspectives, organizational communication, risk and crisis communication, and media, data, design, and technology. The second volume focuses on real-world communication topics such as health and education communication, legal, ethical, and policy issues, and volunteerism, social justice, and communication activism. Each chapter addresses a specific issue or concern, and discusses the choices faced by participants in the communication process. This important contribution to communication research: Explores how various communication contexts are best approached Addresses balancing scientific findings with social and cultural issues Discusses how and to what extent media can mitigate the effects of adverse events Features original findings from ongoing research programs and original communication models and frameworks Presents the best available research and insights on where current research and best practices should move in the future A major addition to the body of knowledge in the field, The Handbook of Applied Communication Research is an invaluable work for advanced undergraduate students, graduate students, and scholars.

international journal of vaccine theory practice and research: Vaccinati non vaccinati

Robert F. Jr. Kennedy, Brian Hooker, 2024-08-09 Per la prima volta viene presentata al pubblico la letteratura scientifica che mette a confronto la salute e il benessere dei bambini regolarmente vaccinati, di quelli vaccinati in parte e di quelli che non lo sono affatto. Oltre 100 sono gli studi sottoposti a revisione paritaria che raccontano la ricerca scientifica più recente e più autorevole sull'argomento. Interamente a colori, con grafici di immediata comprensione. Un libro indispensabile per poter scegliere in modo consapevole.

international journal of vaccine theory practice and research: TRANS-UMANESIMO E NEO-UMANESIMO Aurelio Bruno, 2022-12-26 Il presupposto filosofico che sta alla base del pensiero transumanista è l'assunto secondo il quale l'anima non esiste. Da esso discende la convinzione sulla finitezza della vita umana, inaccettabilmente priva di senso. Novello apprendista stregone, l'uomo moderno tenta, dunque, disperatamente di sfuggire alla morte, perpetuando la permanenza in un corpo fisico che, invece, per ineffabile comando interiore si deteriora con il tempo. Quasi a volersi celare sotto mentite spoglie, egli, allora, si cimenta in una rocambolesca fuga dalla natura: per questo modifica il proprio corpo fisico, finanche nel codice genetico. Detta così sembrerebbe una libera scelta individuale: in realtà immensi interessi economici sono sottesi a tale deriva distopica. Un pamphlet più che un saggio, il testo costituisce una risposta, tanto filosofica quanto giuridica, alle insidie poste dal transumanesimo all'uomo di oggi.

international journal of vaccine theory practice and research: Sold Out - Ausverkauft

James Rickards, 2022-12-11 Politische Instabilität und steigende Inflation – der renommierte Ökonom James Rickards prophezeit nichts weniger als den Zusammenbruch der Weltwirtschaft. Die Anzeichen dafür erscheinen harmlos, aber sie mehren sich: Immer öfter sind bestimmte Produkte in den Geschäften nicht zu finden. Der Grund dafür ist, dass die Lieferketten nicht mehr funktionieren. Die Produkte stecken in irgendeinem Container, auf irgendeinem Schiff, in irgendeinem Ozean in einer Warteschleife fest. Lieferketten gibt es seit Anbeginn der Menschheit. In den letzten Jahren haben sie sich jedoch ins Unermessliche gesteigert – und damit stieg auch ihre Anfälligkeit. Jedes Versagen zieht ein weiteres Versagen in einem anderen Teil der Kette nach sich. Genau das ist es, was wir gerade erleben: eine unkontrollierbare Kaskade von Ausfällen in den globalen Lieferketten. Bei dem Zusammenbruch spielt Deutschland eine besondere Rolle: Wir sind die viertgrößte Volkswirtschaft der Welt und nahezu existenziell von Exporten abhängig, um unseren Wohlstand zu sichern. Kein anderes Land der Welt ist stärker in die globalen Lieferketten integriert, und somit ist auch keines stärker von den Störungen betroffen. Deutschland befindet sich im Auge des Sturms. In

Sold Out - Ausverkauft schlüsselt James Rickards die geschichtlichen Zusammenhänge und die strukturellen Gegebenheiten der Wirtschaft auf der ganzen Welt auf. Wer verstehen will, wie alles miteinander zusammenhängt, muss dieses Buch lesen. Es vermittelt die Komplexität der Weltwirtschaft auf meisterhafte Weise - und es erklärt, was wir tun können, um den globalen Kollaps zu verhindern.

international journal of vaccine theory practice and research: Tosielämän teatteria Atte Mallenius, 2024-05-07 Tosielämän teatteria kuljettaa lukijan hengästyttävälle matkalle läpi vuosien 2020-2023, kertoen moniulotteisen tarinan koronapandemian aikakaudesta. Kirjan sivuilla lukija sukeltaa syvälle tapahtumien maailmaan, missä draama ja todellisuus sekoittuvat ainutlaatuisella tavalla. Teos ei pelkästään raportoi faktoja ja tilastoja, vaan se luo näyttämön, jossa poliittiset pelit, terveystieteet ja salailu ovat pääosassa. Kirjan kerronta on kuin teatteriesitys, joka viihdyttää ja jännittää samalla kun se valaisee monimutkaisia tapahtumia. Lukija tempautuu mukaan psykologiseen matkaan, missä valon ja varjon väliset taistelut heijastuvat ihmisten arkeen ja päätöksentekoon. Vaikka aihe on vakava, kirja on kirjoitettu viihdyttävästi ja eloisasti, tehden vaikeasta aiheesta helposti lähestyttävän ja kiinnostavan. Tosielämän teatteria ei jää pelkkään pintaraapaisuun, vaan se sukeltaa syvemmälle tapahtumien taustoihin, psykologiaan ja illuusioihin, joita meihin on kohdistettu. Se herättää kysymyksiä siitä, mitä totuus todella on ja miten voimme erottaa sen valheesta. Kirjan avulla lukija saa työkaluja kriittiseen ajatteluun ja omien valintojen tekemiseen vaikeina aikoina.

international journal of vaccine theory practice and research: Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

international journal of vaccine theory practice and research: James Rickards, 2023-10-12

international journal of vaccine theory practice and research: The Ethics of Vaccination
Alberto Giubilini, 2018-12-28 This open access book discusses individual, collective, and institutional responsibilities with regard to vaccination from the perspective of philosophy and public health ethics. It addresses the issue of what it means for a collective to be morally responsible for the realisation of herd immunity and what the implications of collective responsibility are for individual and institutional responsibilities. The first chapter introduces some key concepts in the vaccination debate, such as 'herd immunity', 'public goods', and 'vaccine refusal'; and explains why failure to vaccinate raises certain ethical issues. The second chapter analyses, from a philosophical perspective, the relationship between individual, collective, and institutional responsibilities with regard to the realisation of herd immunity. The third chapter is about the principle of least restrictive alternative in public health ethics and its implications for vaccination policies. Finally, the fourth chapter presents an ethical argument for unqualified compulsory vaccination, i.e. for compulsory vaccination that does not allow for any conscientious objection. The book will appeal to philosophers interested in public health ethics and the general public interested in the philosophical underpinning of different arguments about our moral obligations with regard to vaccination.

international journal of vaccine theory practice and research: Nano- und Biotechnologie
Joachim Sonntag, 2023-05-03 Dieses Buch behandelt die biotechnologischen Grundlagen für den Aufbau eines Nano-Kommunikationsnetzes im menschlichen Körper, populärwissenschaftlich aufbereitet. Das Nano-Kommunikationsnetz ist die Voraussetzung für den Online-Anschluss des Menschen an das Internet. Maschinen werden unsere Gedanken lesen und uns Gedanken und Gefühle eingeben können. Eines der Erkennungsmerkmale der 4. Industriellen Revolution ist, dass sie nicht verändert, was wir tun, sondern sie verändert uns. (Klaus Schwab, Gründer und Vorsitzender des WEF)

international journal of vaccine theory practice and research: 2025 - Der letzte Akt
Sonntag Joachim, 2021-07-12 Corona & Klima sind der Schlüssel für den GREAT RESET, der Einstieg in die Neue Weltordnung (NWO), die globale Diktatur der Elite, die mittels Künstlicher Intelligenz (KI), Geoengineering (Wetterdesign), Biotechnology (Gentechnische Veränderung von Pflanze, Tier und Mensch), Human Enhancement (Eugenik), Genom Engineering (industrielle Menschenherstellung), Neuroscience (Manipulation unseres Gehirns, unseres Geistes), dem Internet der Dinge (IoT) sowie synthetischen Lebensmitteln (GVO), die vollständige Kontrolle, Versklavung und eine starke Reduzierung der Menschheit durchsetzen will.

international journal of vaccine theory practice and research: 2025 - Der letzte Akt
Joachim Sonntag, 2022-09-28 Die 4. Industrielle Revolution & Menschenexperimente Seit vielen Jahren laufen biotechnologische Freilandexperimente zur Entwicklung einer Schnittstelle zwischen dem menschlichen Gehirn und einem Computer. Die experimentellen Covid-19-Impfstoffe und die begleitenden Gesetzesänderungen zur Sicherheit und Kontrolle der Impfstoffe (kurz MedBVS) machen es möglich, die aussichtsreichsten Kandidaten von Schnittstellen unter realen Praxisbedingungen am Menschen zu erproben und zu optimieren. Diese vier Säulen, - Schnittstelle Gehirn-Computer, - die geplante weltweite Impfpflicht, - der digitale Impfpass und - Künstliche Intelligenz (KI) werden die absolute Kontrolle aller Menschen ermöglichen, sogar die Änderung von Wahrnehmungen, Stimmungen, Fühlen und Wollen. So macht auch die Ansage Sinn: Sie werden nichts besitzen, keine Privatsphäre haben & sie werden glücklich sein. (Klaus Schwab, Gründer und Vorsitzender des WEF)

international journal of vaccine theory practice and research: Corona - Was uns die Pandemie lehren kann Christoph Bernhardt, Thomas Hardtmuth, Christoph Hueck, Hartmut Ramm, Bernd Ruf, 2022-02-01 Mit dem Jahr 2022 stehen wir in der Pandemie vor der Frage: Gelingt es uns, die Stimmen von Covid-19-Impfbefürwortern und Skeptikern als eine zweistimmige Melodie zu hören, deren beide Stimmen gleichberechtigt nebeneinander zu einem Ganzen erklingen können? Oder bleibt es dabei, dass Impfskeptiker nur in die Ecke von 'schwurbelnden Querdenkern' geschoben oder als 'Egoisten', 'Covidioten' u.ä. bezeichnet werden? Brauchen wir nicht vielmehr diese zweite Stimme gegenüber der offiziellen Melodie, um den Lehren aus der Pandemie gerecht zu werden, um von den Konsonanzen und Dissonanzen das Notwendige zu lernen und der gesellschaftlichen Spaltungstendenz etwas Versöhnliches entgegenzusetzen? Die acht Beiträge dieses Buches wollen zu einer Besinnung beitragen, die das Vertrauen auf die gesunden Grundlagen menschlicher Immunität stärkt. Die anthroposophisch orientierten Autor*innen ziehen damit auch ein Resümee aus ihren zweijährigen Erfahrungen mit der Pandemie, die sie gerne mit den LeserInnen teilen möchten.

international journal of vaccine theory practice and research: Vaccine Analysis: Strategies, Principles, and Control Brian K. Nunnally, Vincent E. Turula, Robert D. Sitrin, 2014-11-27 This book is an indispensable tool for anyone involved in the research, development, or manufacture of new or existing vaccines. It describes a wide array of analytical and quality control technologies for the diverse vaccine modalities. Topics covered include the application of both classical and modern bio-analytical tools; procedures to assure safety and control of cross contamination; consistent biological transition of vaccines from the research laboratory to manufacturing scale; whole infectious attenuated organisms, such as live-attenuated and inactivated whole-cell bacterial vaccines and antiviral vaccines using attenuated or inactivated viruses; principles of viral inactivation and the application of these principles to vaccine development; recombinant DNA approaches to produce modern prophylactic vaccines; bacterial subunit, polysaccharide and glycoconjugate vaccines; combination vaccines that contain multiple antigens as well as regulatory requirements and the hurdles of licensure.
