Infectious diseases and the consequences of poorly supervised pregnancies have been replaced by cerebrovascular accidents and malignancies. The secrecy with which the White House has traditionally handled inquiries about the health of the president's wife is explored in detail; however, several first ladies, notably Betty Ford, have been transparent about their illnesses in order to educate the public. The effects of a first lady's responsibilities on her health is examined. This book also seeks to discern how the well-being of the first lady influences presidential performance.

**michelle obama prostate: Overdiagnosed** H. Gilbert Welch, Lisa Schwartz, Steve Woloshin, 2011-01-18 An exposé on Big Pharma and the American healthcare system's zeal for excessive medical testing, from a nationally recognized expert More screening doesn't lead to better health—but can turn healthy people into patients. Going against the conventional wisdom reinforced by the medical establishment and Big Pharma that more screening is the best preventative medicine, Dr. Gilbert Welch builds a compelling counterargument that what we need are fewer, not more, diagnoses. Documenting the excesses of American medical practice that labels far too many of us as sick, Welch examines the social, ethical, and economic ramifications of a health-care system that unnecessarily diagnoses and treats patients, most of whom will not benefit from treatment, might be harmed by it, and would arguably be better off without screening. Drawing on 25 years of medical practice and research on the effects of medical testing, Welch explains in a straightforward, jargon-free style how the cutoffs for treating a person with "abnormal" test results have been drastically lowered just when technological advances have allowed us to see more and more "abnormalities," many of which will pose fewer health complications than the procedures that ostensibly cure them. Citing studies that show that 10% of 2,000 healthy people were found to have had silent strokes, and that well over half of men over age sixty have traces of prostate cancer but no impairment, Welch reveals overdiagnosis to be rampant for numerous conditions and diseases, including diabetes, high cholesterol, osteoporosis, gallstones, abdominal aortic aneurysms, blood clots, as well as skin, prostate, breast, and lung cancers. With genetic and prenatal screening now common, patients are being diagnosed not with disease but with "pre-disease" or for being at "high risk" of developing disease. Revealing the economic and medical forces that contribute to overdiagnosis, Welch makes a reasoned call for change that would save us from countless unneeded surgeries, excessive worry, and exorbitant costs, all while maintaining a balanced view of both the potential benefits and harms of diagnosis. Drawing on data, clinical studies, and anecdotes from his

own practice, Welch builds a solid, accessible case against the belief that more screening always improves health care.

**michelle obama prostate: Making Eye Health a Population Health Imperative** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Public Health Approaches to Reduce Vision Impairment and Promote Eye Health, 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes

a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

**michelle obama prostate: Healthy at Last** Eric Adams, 2020-10-13 New York mayor Eric Adams is on a mission to tackle one of the most stubborn health problems in the country: chronic disease in the African American community. African Americans are heavier and sicker than any other group in the U.S., with nearly half of all Black adults suffering from some form of cardiovascular disease. After Adams woke up with severe vision loss one day in 2016, he learned

that he was one of the nearly 5 million Black people living with diabetes-and, according to his doctor, he would have it for the rest of his life. A police officer for more than two decades, Adams was a connoisseur of the fast-food dollar menu. Like so many Americans with stressful jobs, the last thing he wanted to think about was eating healthfully. Fast food was easy, cheap, and comfortable. His diet followed him from the squad car to the state senate, and then to Brooklyn Borough Hall, where it finally caught up with him. But Adams was not ready to become a statistic. There was a better option besides medication and shots of insulin: food. Within three months of adopting a plant-based diet, he lost 35 pounds, lowered his cholesterol by 30 points, restored his vision, and reversed his diabetes. Now he is on a mission to revolutionize the health of not just the borough of Brooklyn, but of African Americans across the country. Armed with the hard science and real-life stories of those who have transformed their bodies by changing their diet, Adams shares the key steps for a healthy, active life. With this book, he shows readers how to avoid processed foods, cut down on salt, get more fiber, and substitute beef, chicken, pork, and dairy with delicious plant-based alternatives. In the process he explores the origins of soul food-a cuisine deeply important to the Black community, but also one rooted in the horrors of slavery-and how it can be reimaged with healthy alternatives. Features more than 50 recipes from celebrities and health experts, including Paul McCartney, Queen Afua, Jenné Claiborne, Bryant Jennings, Charity Morgan, Moby, and more! The journey to good health begins in the kitchen-not the hospital bed!

**michelle obama prostate: Insight** Bart Willigers, 2024-05-24 The year 2022 was supposed to be the best year of my career. Being in my early 50s I was about to complete my first decade working in the pharmaceutical industry. I would be lying if I said that the transition from the energy industry to pharmaceuticals had been easy, but after a few difficult years I felt confident about the future. Then one day, I was rushed to hospital because I had collapsed in the garden. A scan showed that I had a brain tumour. From that day onwards matters changed dramatically – things that were important to me before lost all their value whilst other things that I had taken for granted before became suddenly very important to me. This book is my attempt to make a difference to all people who are suffering from a terminal illness, or indeed all people who must make personal decisions at difficult and emotionally charged times. This book is intended for individuals who wish to improve their decision-making skills by using structured and analytical thinking. In this personal book, I am using examples and thought experiments to illustrate how decision analysis can be used to increase our awareness of available choices and uncertainties that we are exposed to.

**michelle obama prostate: The White House Physician** Ludwig M. Deppisch, M.D., 2007-07-30 When President George Washington fell ill six short weeks after his inauguration, he summoned Samuel Bard, one of the most prominent physicians of the day. Thereafter, when residing at his presidential home in Manhattan, Washington consistently relied on Bard for medical care. Thus Bard became the first in a line of presidential physicians, the providers of medical care for

America's chief executive. From George Washington to George W. Bush, this volume examines 217 years of health care in the White House and the men and women who ministered to these presidential patients. Beginning with that first presidential physician's visit on June 13, 1789, it analyzes the relationships--sometimes fruitful and sometimes disastrous--of the presidents with their physicians. While biographical sketches detailing the background of each physician are included, the main focus of the work is the especially complex physician-patient relationship and the ways in which it has changed over time. The evolution of the presidential physician's responsibilities is also discussed, as are developments in American medicine during presidential terms.

**michelle obama prostate:** *Diagnosis* Lisa Sanders, 2019-08-13 A collection of more than fifty hard-to-crack medical quandaries, featuring the best of The New York Times Magazine's popular Diagnosis column—now a Netflix original series “Lisa Sanders is a paragon of the modern medical detective storyteller.”—Atul Gawande, author of *Being Mortal* As a Yale School of Medicine physician, the New York Times bestselling author of *Every Patient Tells a Story*, and an inspiration and adviser for the hit Fox TV drama *House, M.D.*, Lisa Sanders has seen it all. And yet she is often confounded by the cases she describes in her column: unexpected collections of symptoms that she and other physicians struggle to diagnose. A twenty-eight-year-old man, vacationing in the Bahamas for his birthday, tries some barracuda for dinner. Hours later, he collapses on the dance floor with crippling stomach pains. A middle-aged woman returns to her doctor, after visiting two days earlier with a mild rash on the back of her hands. Now the rash has turned purple and has spread across her entire body in whiplike streaks. A young elephant trainer in a traveling circus, once head-butted by a rogue zebra, is suddenly beset with splitting headaches, as if someone were “slamming a door inside his head.” In each of these cases, the path to diagnosis—and treatment—is winding, sometimes frustratingly unclear. Dr. Sanders shows how making the right diagnosis requires expertise, painstaking procedure, and sometimes a little luck. Intricate, gripping, and full of twists and turns, *Diagnosis* puts readers in the doctor's place. It lets them see what doctors see, feel the uncertainty they feel—and experience the thrill when the puzzle is finally solved.

by a contagion of alarming candor. A mysterious virus has infiltrated the good people of Lake Wobegon, transmitted via unpasteurized cheese made by a Norwegian bachelor farmer, the effect of which is episodic loss of social inhibition. Mayor Alice, Father Wilmer, Pastor Liz, the Bunsens and Krebsbachs, formerly taciturn elders, burst into political rants, inappropriate confessions, and rhapsodic proclamations, while their teenagers watch in amazement. Meanwhile, a wealthy outsider is buying up farmland for a Keep America Truckin' motorway and amusement park, estimated to draw 2.2 million visitors a year. Clint Bunsen and Elena the hometown epidemiologist to the rescue, with a Fourth of July Living Flag and sweet corn feast for a finale. In his newest Lake Wobegon novel, Garrison Keillor takes us back to the small prairie town where for so long American readers and listeners have found laughter as well as the wry airing of our foibles and most familiar desires and fears—a town where, as we know, all the women are strong, all the men are good-looking, and all the children are above average.

**michelle obama prostate: First Ladies** Betty Caroli, 2010-07-15 Betty Boyd Caroli's engrossing and informative First Ladies is both a captivating read and an essential resource for anyone interested in the role of America's First Ladies. This expanded and updated fourth edition includes Laura Bush's tenure, Hillary Clinton's 2008 presidential bid, and an in-depth look at Michelle Obama, one of the most charismatic and appealing First Ladies in recent history. Covering all forty-one women from Martha Washington to Michelle Obama and including the daughters, daughters-in-law, and sisters of presidents who sometimes served as First Ladies, Caroli explores each woman's background, marriage, and accomplishments and failures in office. This remarkably diverse lot included Abigail Adams, whose remember the ladies became a twentieth-century feminist refrain; Jane Pierce, who prayed her husband would lose the election; Helen Taft, who insisted on living in the White House, although her husband would have preferred a judgeship; Eleanor Roosevelt, who epitomized the politically involved First Lady; and Pat Nixon, who perfected what some have called the robot image. They ranged in age from early 20s to late 60s; some received superb educations for their time, while others had little or no schooling. Including the courageous and adventurous, the emotionally unstable, the ambitious, and the reserved, these women often did not fit the traditional expectations of a presidential helpmate. Here then is an engaging portrait of how each First Lady changed the role and how the role changed in response to American culture. These women left remarkably complete records, and their stories offer us a window through which to view not only this particular sorority of women, but also American women in general. Impressive...Caroli's profiles and observations of American first ladies and their relationship to the media are intelligent and perceptive. --Philadelphia Inquirer

**michelle obama prostate:** *Inequality and African-American Health* Hill, Shirley A., 2016-10-05 This book shows how living in a highly racialized society affects health through multiple social contexts, including neighborhoods, personal and family relationships, and the medical system. Black-white disparities in health, illness, and mortality have been widely documented, but most research has focused on single factors that produce and perpetuate those disparities, such as individual health behaviors and access to medical care. This is the first book to offer a comprehensive perspective on health and sickness among African Americans, starting with an examination of how race has been historically constructed in the US and in the medical system and the resilience of racial ideologies and practices. Racial disparities in health reflect racial inequalities in living conditions, incarceration rates, family systems, and opportunities. These racial disparities often cut across social class boundaries and have gender-specific consequences. Bringing together data from existing quantitative and qualitative research with new archival and interview data, this book advances research in the fields of families, race-ethnicity, and medical sociology.

**michelle obama prostate:** *Statistical Methods for Recommender Systems* Deepak K. Agarwal, Bee-Chung Chen, 2016-02-24 Designing algorithms to recommend items such as news articles and movies to users is a challenging task in numerous web applications. The crux of the problem is to rank items based on users' responses to different items to optimize for multiple objectives. Major technical challenges are high dimensional prediction with sparse data and constructing high dimensional sequential designs to collect data for user modeling and system design. This comprehensive treatment of the statistical issues that arise in recommender systems includes detailed, in-depth discussions of current state-of-the-art methods such as adaptive sequential designs (multi-armed bandit methods), bilinear random-effects models (matrix factorization) and scalable model fitting using modern computing paradigms like MapReduce. The authors draw upon their vast experience working with such large-scale systems at Yahoo! and LinkedIn, and bridge the gap between theory and practice by illustrating complex concepts with examples from applications they are directly involved with.

**michelle obama prostate:** *Free to a Good Home* Catherine Deveny, 2009-11-23 Take two reality pills and call me in the morning. Swine Flu. Financial meltdown. It's been a bad year for pigs and pigs in suits. The only thing for it is a good dose of Catherine Deveny, who each week in the Age puts everything into perspective with her trademark iconoclastic wit. *Free to a Good Home* includes her thoughts on gifted children and breakfast television, sexy billboards and the bill of rights. She reflects on her youngest child's first day at school, and on how to be happy in hard times. Fearlessly funny and always provocative, Deveny is the perfect antidote to the modern world's ills. Can anyone explain why I did this? I went to the chemist and bought this crap I put on my face to make me look younger. I put the jar on the counter. The chemist girl said, 'Is this stuff any good?' I said, 'Yeah.' She said, 'Really?' I said, 'I'm sixty.' Eyes like saucers, mouth agape, she gasped, 'OH MY GOD! Sixty! Toula! Fatima! Kelly! Come and check out this old lady. She's sixty!' So the other chemist girls scurried over and after a bit of oohing and aahing one said, 'Oh my God! Sixty? You look like you're

forty-five!' I'm forty. Chemist girls, one. Smart-arse, zero.

**michelle obama prostate: How to Make a Plant Love You** Summer Rayne Oakes, 2019-07-09 Summer Rayne Oakes, an urban houseplant expert and environmental scientist, is the icon of wellness-minded millennials who want to bring nature indoors, according to a New York Times profile. Summer has managed to grow 1,000 houseplants in her Brooklyn apartment (and they're thriving!) Her secret? She approaches her relationships with plants as intentionally as if they were people. Everyone deserves to feel the inner peace that comes from taking care of greenery. Beyond the obvious benefits--beauty and cleaner air--there's a strong psychological benefit to nurturing plants as a path to mindfulness. They can reduce our stress level, lower our blood pressure, and improve our overall outlook. And they offer a rare opportunity to find joy by caring for another living being. When Summer Rayne Oakes moved to Brooklyn from the Pennsylvania countryside, she knew that bringing nature indoors was her only chance to stay sane. She found them by the side of the road, in long-forgotten window boxes, at farmers' markets, and in local garden shops. She found ways to shelve, hang, tuck, anchor, secure, and suspend them. She even installed a 150-foot expandable hose that connects to pipes under her kitchen sink, so she only has to spend about a half-hour a day tending to her plants--an activity that she describes as a moving meditation. This is Summer's guidebook for cultivating an entirely new relationship with your plant children. Inside, you'll learn to: Pause for the flowers and greenery all around you, even the ones sprouting bravely between cracked pavement Trust that your apartment jungle offers you far more than pretty décor See the world from a plant's perspective, trading modern consumerism for sustainability Serve your chlorophyllic friends by learning to identify the right species for your home and to recreate their natural habitat (Bonus: your indoor garden won't die!) When we become plant parents, we also become better caretakers of ourselves, the people around us, and our planet. So, let's step inside the world of plants and discover how we can begin cultivating our own personal green space--in our homes, in our minds, and in our hearts.
