p valley: Watching While Black Rebooted! Beretta E. Smith-Shomade, 2023-11-10 Watching While Black Rebooted: The Television and Digitality of Black Audiences examines what watching while Black means in an expanded U.S. televisual landscape. In this updated edition, media scholars return to television and digital spaces to think anew about what engages and captures Black audiences and users and why it matters. Contributors traverse programs and platforms to wrestle with a changing television industry that has exploded and included Black audiences as a new and central target of its visioning. The book illuminates history, care, monetization, and affect. Within these frames, the chapters run the gamut from transmediation, regional relevance, and superhuman visioning to historical traumas and progress, queer possibilities, and how televisual programming can make viewers feel Black. Mostly, the work tackles what the future looks like now for a changing televisual industry, Black media makers, and Black audiences. Chapters rethink such historically significant programs as *Roots* and *Underground*, such seemingly innocuous programs as *Soul Food*, and such contemporary and culturally complicated programs as *Being Mary Jane* and *Atlanta*. The book makes a case for the centrality of these programs while always recognizing the racial dynamics that continue to shape Black representation on the small screen. Painting a decidedly introspective portrait across forty years of Black television, *Watching While Black Rebooted* sheds much-needed light on under examined demographics, broadens common audience considerations, and gives deference to the preferences of audiences and producers of Black-targeted programming.

p valley: AQUIFER STORAGE AND RECOVERY IN MILLVILLE, CACHE COUNTY, UTAH Paul Inkenbrandt, 2016-08-15 This study is an investigation of the feasibility of an aquifer storage and recovery project using the existing water supply infrastructure of the city of Millville, Utah. The project involved injecting water from a public water supply spring into a public water supply well. Geochemical analysis indicates that the major ion chemistry of the spring water is very similar to that of the principal aquifer, however, the spring water would likely cause minor geochemical

changes in the groundwater due to oxidation. The study also showed that the injection well had elevated nitrate concentration which is likely due to septic systems in the area. Overall, the pilot tests showed that injection of water for storage would not be detrimental to the principal aquifer, which has significant storage abilities beyond the capacity of Millville's water system; however elevated nitrate in the aquifer is a problem that should be addressed.
